

Getting Started

An overview of XY Finance and the services that spawn on it

XY Finance at a Glance

XY Finance Ecosystem, with XY Token (\$XY as the ticker), serves as the heart of the XY DAO and the protocol itself. XY is a community-driven platform established to address what might be called the "liquidity problem," ensuring that users benefit from the best routes, while liquidity providers are incentivized with \$XY to steadily stack yields. Meanwhile, we are providing utility and functionality to \$XY through multiple innovative methods and strategic partnerships.

As a cross-chain interoperability protocol that aggregates not only DEXs but also bridges, we help route your assets of various **types**, with the best **rate** possible and the top **speed & security**. Regardless of split or batch transactions, XY Finance helps strike the best bargains with minimized rates. Plus, cross-chain transfer & every transaction step will be carried out in an instant, faster than that of our competitors in the industry. While most have this sneaking suspicion that the platform's safety might be sacrificed due to our pursuit of transaction speed, they're mistaken. Our devs have tapped effortlessly into some mechanisms to ensure the security of your funds.

XY Finance connects every chain, swaps every asset, and serves every user here and there. With the ultimate routing across multi-chains, borderless and seamless swapping is simply several clicks away.

yBridge

In order to achieve the most convenient and fastest cross-chain swap process, XY Finance also has its own bridge called **yBridge**. While yBridge serves as a decentralized non-custodial interoperability solution, it facilitates communication and connection between different blockchain networks.

It offers a user-friendly interface for transferring a wide variety of tokens to various blockchains and L2 roll-up solutions while maintaining an efficient cross-chain liquidity pool.

As a result, we are able to create more opportunities for this cross-chain network to provide users with more convenient and cost-effective pricing, as well as offer developers and Dapp creators a more convenient cross-chain infrastructure.

Closing Thoughts

XY Finance establishes a thorough cross-chain swap mechanism and seamless user experience for both brands and traders.

That having been said, this is just the beginning. XY Finance will continue to extend ourselves and keep evolving with the DeFi community to introduce new features. With the Research & Development Team's creativity and XY DAO community's engagement, XY Finance will constantly vet our own products and do the utmost to develop more diverse functions to further stabilize this ecosystem.
